

Research seminar «*Mathematical Problems of Cybernetics*»

Friday, 18 February 2022:

Aleksander Viktorovich Chashkin (Moscow, Lomonosov Moscow State University)

«**Linear hashing**».

Abstract. Linear hashing in the n -dimensional Boolean cube is discussed. Specifically, upper bounds for the rank of linear hash functions with clusters of nonunit sizes in which the rank of a function depends on the size of the hashed domain and the maximum cluster size are proved.
